Education

University of California, Santa Barbara — Santa Barbara, CA
Ph.D. Candidate in Computer Science — Expected Graduation: June 2026

University of California, Santa Barbara — Santa Barbara, CA
B.S. in Computer Science (3.94 GPA) — Class of 2020
College of Engineering Honors

Work Experience

Researcher in Distributed Systems Lab
University of California, Santa Barbara — September 2020 – Current

- Implemented end-to-end private transformer inference with homomorphic encryption [1].
- Optimized key rotations by developing new protocols to eliminate race conditions while utilizing new updatable encryption primitives, resulting in an accepted research paper [4].
- Developed a virtual reality application to spatialize music, resulting in a paper at a top conference [6].
- Developed an augmented reality mobile application for spatial music, culminating in an accepted paper at a top HCI conference [7].
- Reduced workload imbalance for distributed system backends by developing a front end cache [8].
- Managed students and research teams, resulting in successful projects

Software Engineering Intern, Google
Sunnyvale, CA — June 2024 - September 2024

- Developed a pipeline in MLIR to compile a Python machine learning models into CKKS homomorphic encryption, leading to a 3000x performance improvement over previous infrastructure
- Implemented optimized matrix multiplication FHE kernels, leading to a 6x performance improvement
- Led directly to a research paper submission at a top security conference [3]

Software Engineering Intern, Oracle
Redwood City, CA — June 2021 – September 2021, June 2022 - September 2022

- Conducted research on optimizing for net benefit of query plan native compilation by modeling native compilation benefit and clustering to group similar query plans, leading to a patent [5]

Software Engineer Intern, Toyon Research Corporation
Goleta, CA — July 2019 – September 2020

- Improved accuracy of object detection in applications of cutting edge models like RetinaNet and Faster R-CNN by tuning hyperparameters and implementing image transformations
- Authored monthly progress reports by analyzing results for government contracts
- Created image classification model using ResNet to determine benefits of additional LIDAR data

Software Engineer Intern, Calix Inc.
Goleta, CA — June 2017 – July 2018

- Developed automation framework on host computer instructing DUT to run self-diagnostics
- Debugged hardware abstraction layer on embedded systems Linux OS
